

Direcht Restore

The only full standard digital version of the award winning paper RESTORE2™

What is deterioration monitoring?

Deterioration Monitoring & Escalation is a critical element of care within the service a care facility provides. Through the use of powerful analytics for the input data, Direcht Restore sends an alert if a deterioration pathway is detected - before it's too late.

Direcht Restore is the only complete deterioration monitoring and escalation solution on the market - developed in partnership with the Hampshire, Southampton & Isle of Wight ICB.

Direcht Restore is the digital version of the full paper RESTORE2™ pioneered by the Hampshire, Southampton and Isle of Wight ICB. Direcht Restore is the only solution on the market that has been developed in partnership with the pioneers of RESTORE2™ and has implemented the full version of the paper form currently being used in Care Homes across the country.

- ✓ Intuitive, easy to use system
- ✓ Empowers carers with critical data
- ✓ Ensures compliance for easy review by the CQC
- ✓ Incorporates industry metrics including Soft Signs, Vital Signs, SBARD, Medical Emergency, Escalation Settings and powerful Analytics that can be shared instantly with a medical professional

Right care, right time, right place and right outcome.
